Abstract (en)  
[origin: EP0598268A1] In an installation for compensating deflection of an intaglio printing forme cylinder (1) of a rotary printing machine, the object consists in achieving multicolour printing of adequate quality using a forme cylinder (1) of large printing width and small diameter. According to the invention, this is achieved in that a pressing-on roller (16) is provided, which can be engaged from below against the outer surface (6) of the forme cylinder (1) and whose length (l) is shorter than the face length (l1) of the forme cylinder (1). <IMAGE>
