Abstract (en)
A device is described for the finishing of hanging parts (1) by means of a vibrating machine, said device consisting of a supporting element (5) which is mobile vertically with respect to the vibrating unit (8), said supporting element (5) bearing a variable number of polygonal section bars (2) inserted into passing holes (6) drilled in the same supporting element (5) and yet free to move, said bars (2) having the upper end wider than the rest so that they cannot pass through the passing hole (6) into which they are inserted and the lower end (3) in form of a hook or pin in order to fix the part (1) to subject to the finishing treatment in the vibrating unit (8). <IMAGE>
