Abstract (en)

[origin: GB2279102A] A ladder (1) is provided with a multi-purpose head (19) which may be fixed on the ladder by means of two transition pieces (101/101'). The head (19) has supporting paws (29) which allow not only the secure positioning of the ladder on straight wall faces, internal corners and external corners but additionally increase the security for the user. Additional bearing faces may be provided to allow stable support on ledge-like wall projections. Vertically and horizontally acting bearing faces are used for this purpose. The multi-purpose head may be fastened in a selectable height position on the ladder via rapid gripping elements. <IMAGE>
