Abstract (en)

[origin: EP0599171A1] The proposal is for a method of monitoring and/or controlling a hydraulic pressure reservoir on a diecasting or injection diecasting machine, in which the operating point of a pressure reservoir is subjected to very accurate detection or monitoring and control. In this arrangement, the operating point of the pressure reservoir can be varied by means of a number of different influencing variables, control being performed by an actual/desired value comparison involving predetermined tolerance values. <IMAGE>
