Abstract (en)
[origin: EP0599255A1] 1. Hinge for glass swing doors having two hinge parts (1, 2), which are connected to one another in an articulated manner about an articulation axis (3), and a latching device. 2.1 The known hinges offer one latching position in one or more positions of the door leaf. The novel hinge permits the adjustment of the latching position of the door leaf in the mounted state. 2.2 A latching cutout (6) is provided on the circumference of a body of rotation (7) which is mounted in one of the two hinge parts (1, 2) such that it can rotate about an articulation axis (3) and can be fixed via an adjustment screw (9) which is accessible from one side of the hinge. 2.3 The hinge for glass swing doors permits the adjustment of the latching position of the door leaf in the mounted state. <IMAGE>
