Abstract (en)

[origin: WO9303859A1] The present invention relates to a method for scraping off as a continuous process any surplus material present in a plastic condition. The method is executed during the advance of long strip and/or flat-surfaced workpieces, each of which is provided with at least one applied coat of the material. The invention is characterized in that the material is scraped off in a direction cross-wise to the direction of advance of the workpieces, with compression of the material in a direction contrary to the aforementioned direction of advance. The invention also relates to an arrangement for executing the method.
