Abstract (en)

[origin: EP0600103A1] The invention provides a pivot bearing, in the case of which the coupling angle (3) connected to the opening-out device (1) can be brought into positionally secure engagement, suitable for absorbing all forces, with the coupling plate (8) of the bearing part (4) via a leg portion (19, 20), partly in the form of a tongue and bent off in a specific manner, without using any additional parts. <IMAGE>
