Abstract (en)
A tilter mechanism (20) to rotate Venetian blind's headrail (11) directly, comprising a fixed hollow drum (22) secured to the headrail (11); a hollow rotary mechanism (31) rotatably fixed in the hollow drum (22), including a pulley section (32) and an fixing section (33) engaged with the headrail (11) for synchronous motion; a tilt cord (37) made of soft material wound around the pulley section (32) to provide an adequate friction with the pulley section (32) so that the rotary mechanism (31) and the headrail (11) are rotated synchronously by pulling of the tilt cord (37), and consequently the slats (90) are tilted. <IMAGE>
