Abstract (en)

[origin: EP0600230A1] The invention relates to a roller bearing for inking, damping or varnishing unit rollers, which bearing is pressed towards the open side against at least one stationary roller or a stop. The object of the invention is to reduce the effort required for roller exchange and to reduce the risk of injury. According to the invention, this is achieved in that a bearing lever (6) is received in a spring plate (1), which bearing lever is loaded by a spring (15) in a hinge (7) and bears a spring-loaded angle lever (9) which, with the ratchet bush (12) arranged on the bearing lever and a stationary detent wheel (16), forms a ratchet gearing. <IMAGE>
