Abstract (en)
[origin: EP0600329A1] A dismountable bridge is assembled from individual interconnected bridge sections (R, R', N, N'). The individual bridge sections (R, R', N, N') have supports (1) in the form of a right-angled triangle and connected by floor slabs (2), the supports (1) being fixed, at the boundary between two bridge sections (R/R; R/N and N/R), to a common transverse support (6, 6', ...) and the normal sections (N, N') additionally having a bottom boom (10). The majority of parts (supports 1, floor slabs 2, transverse supports 6, 6') forming the bridge are universally usable for normal and centre sections (N, N') and ramp sections (R, R'). <IMAGE>
