Abstract (en)

A set of metal sections has been invented for the construction of movable partition walls (80;88;102) that are practically smooth externally with no irregularities; there is a first metal section (1;10;12;17) constituting uprights for supporting panels (81;103) of said partition walls (80;88;102), that comprises a tubular casing (2;13) provided with joining means (3,4;14,15) suitable for engaging with connecting means (18,84,86;90,91,92;21;34;40) fastened to substantially internal surfaces of said panels (81,103), so that in the finished movable partition walls (80;88;102), said uprights (1;10;12;17) remain inside the layer formed by said panels (81,103). <IMAGE>
