Abstract (en)
[origin: WO9401338A1] The invention concerns a container made of a material which is moulded in the fluid state and allowed to solidify in a pre-determined shape, the container being designed to hold a material or an article and being fitted with a closure (4). In order to simplify the manufacture of the container, the closure is disposed on at least one wall (1) of the container and is moulded with this wall as a single piece so that the closure cannot be separated from the container but can be displaced to allow the contents of the container to be removed. The container and closure are made of the same material. The closure can also be cast from two materials with different properties.
