Abstract (en)
In a socket-type multipolar electrical connector to be used together with a plug-type multipolar electrical connector as its counter connector, a body 1 has first contact-piece holding holes 51 with the horizontal pitch P1 between each adjacent holding holes being fine, and second contact-piece holding holes 52 with the horizontal pitch P2 between each adjacent holding holes being coarse. Contact pieces 41 are fitted in and held by the first and second contact-piece holding holes 51, 52. The assembly pattern in which the contact pieces 41 are arranged, is similar to the assembly pattern of terminals 71 respectively extending from the contact pieces 41. The body 1 and the contact pieces 41 are surrounded by a shield cover 2.
