Abstract (en)
[origin: EP0601283A1] A closure for a medicine bottle (1) comprises a sealing element (3) which is made of polymer material, can be fitted onto the mouth (2) of the medicine bottle (1) and is pressed against the mouth (2) by a metal beaded cap (4), said beaded cap (4) being provided with an opening (6) in the region of its base (5) and being separable in the edge region (7) at least at one circumferential point (8, 9). The beaded cap (4) has a tongue (10) projecting into the opening (6) and having a tongue root (11), which is bounded with a sharp edge relative to the beaded cap (4) at least at the circumferential point (8, 9), and having a tongue tip (12) which is fixed to a metal foil (13) which covers the opening (6) in its entirety. The metal foil (13) is designed so that it can be lifted manually on the side opposite the tongue (10). <IMAGE>
