Abstract (en)  
[origin: US5493759A] A furniture hinge having a movable hinge part (40) adapted to be mounted on a door and is connected by at least one pivot pin in an articulating manner with a hinge arm (1), which is adapted to be mounted on the supporting wall (3) by means of an attachment plate (4 and 5). The hinge arm (1) is locked in relation to the attachment plate by means of a set screw (26) which is able to be screwed into the hinge arm and able to be turned with the attachment plate (4 and 5) but not be moved in an axial direction. In order to provide a furniture hinge which has a compact design and is able to be attached to narrow end frame of openings in furniture and which, furthermore, renders possible a pivotal movement of the hinge arm for the purpose of lateral adjustment of a door without altering the gap, in an arm (21) partly overlapping the end side (48) of the supporting wall or of the end frame (3) the attachment plate (4 and 5) is provided with a slot (22) running parallel to the end side (48), which slot (22) parallels the pivot axis of the hinge arm and is in alignment with a slot (47) in the end part, adjacent to the joint, of the hinge arm.
