Abstract (en)  
[origin: EP0601326A1] The invention relates to a coupling for an all-glass door (8) of a displaceable wall element onto a door closer (6) located in a frame. The coupling is carried out via a coupling pin (13) in the fitting (9, 10) of the door and a receiving bore (14) which runs transversely with respect to the frame profile (5) and is located within the spindle exit (7) of the frame door closer (6). In contrast to the floor door closers which are conventionally used, this type of mounting may also be carried out on existing door installations without complex caulking work in the floor region being necessary. <IMAGE>
