Abstract (en)
[origin: EP0601446A1] A securing device for a drainage gutter is known, which comprises a gutter body (1), a covering (30) which can be positioned on an upper border (3) of the gutter body (1), two essentially mutually opposite cutouts (7, 7') in inner side walls of the gutter (1), the securing device having a crossmember (80) which can be inserted, by its ends (81, 81'), into the cutouts such that it runs in the interior of the gutter (1), transversely with respect to the longitudinal axis thereof, and further comprises fastening devices (20, 40) in order to fasten the covering (30) on the crossmember (80) and consequently on the gutter (1). It is proposed to equip the crossmember (80), at at least one end (81, 81') with a clamping device (82, 82') which is configured such that the crossmember (80) is fixed in the gutter (1) once it has been inserted into the cutouts. <IMAGE>
