Abstract (en)

[origin: EP0601506A1] The method according to the invention consists in providing an object to be secured, or its packaging, with two securing devices which use different principles, to be specific, with a device having a resonant circuit (tuned circuit) or with a device having magnetised strips. In a preferred manner, the two securing devices are fitted one on top of the other at the same point on the object to be secured, for example on a common support, this support itself being capable of comprising one of the two securing devices.
