Abstract (en)

[origin: EP0601511A1] The subject of the invention is a method for favouring the comminution of particles which have a low mass and are suspended in a fluid, in which method, by means of at least one fluid jet entering the suspension with a high energy, the particles are caused to strike a surface in order thus to be comminuted by impact. The surface can, for one particle, be the surface of another particle. The invention is above all characterised in that the jet entering the suspension is itself formed from a suspension.
