Abstract (en)
A record book or pad has its sheets formed in pairs each with a removable sheet 1 overlying a record sheet 2. The record sheets 2 are bound at a spine edge part 3 by binding rings 5. Opposed faces 1A and 2A of the sheets in each pair are provided with direct image transfer means (such as reactive coatings or ink capsules) by which a message applied by pressure to the removable sheet 1 is reproduced on the record sheet 2. Leaf edge parts 10 and 11 of the sheets in each pair are retained together by means which permits removal of the removable sheet 1 from the record sheet 2. Such retention may be by low tack adhesive on the removable sheet 1, by permanent adhesive and a line of weakness on the removable sheet 1 or by providing a line of weakness between the removable sheet and the record sheet where those sheets are formed by folding a single sheet. By retaining the leaf edge parts 10 and 11 together, a barrier sheet 25 may be interposed easily and selectively between successive pairs of sheets. Each removable sheet 1 may be extended by a filler sheet portion into the binding rings 5 to provide the book or pad with a uniform thickness.
