Abstract (en)
[origin: EP0602388A1] The invention relates to a pressing rod, such as is used in the main drafting zone of a drawframe of the textile industry. The object of the invention is substantially to reduce deposits on a pressing rod. The object is achieved, on the one hand, in that the stationary pressing rod (101) has a rectangular cross-section, its narrow end faces being round. On the other hand, one solution is that the pressing rod (101) is mounted rotatably in its longitudinal axis (X), the pressing rod (101) preferably having a circular cross-section. <IMAGE>
