Abstract (en)

[origin: EP0602423A1] The present invention refers to a control device of an actuating element in washing machine, particularly a dishwasher, of the type comprising an electronic control circuit and means for supplying a control signal to the actuating element, characterised in that a supply of alternate current is supplied through an electronic switch (TR1) driven by the electronic control circuit, (MP), to rectifying means (D2, D4, D5, D7) which produces the control signal for the actuating element (EA). <IMAGE>
