Abstract (en)
[origin: WO9325942A1] Multifunction analog watch with a removable part for fixing to the watchcase. The removable part has graphic elements relating to at least one of the watch's additional functions, and can include mechanical, electrical or electronic elements acting on the additional function through the watch's external control means, for example, push buttons. By changing the removable part, the watch's graphic elements and even its behaviour can be adapted to given conditions.
