Abstract (en)
[origin: WO9401331A1] The container disclosed may be designed as a cigarette packet, for instance, at the bottom of which is located a tab (4) which can be pivoted inwards by hand to push one or more cigarettes upwards so that one of them can easily be taken out of the packet. The (e.g. cigarette) packet is made starting from the cut sheet usually used, which merely has to be provided with a number of additional cuts and fold lines. Varying the shape of these additional cuts enables tabs (4) of different shapes, producing different aesthetic effects, to be formed, since part (22) of the tab (4) is located at the front of the (e.g. cigarette) packet. The tab shape can thus be adapted to the design of the rest of the (e.g. cigarette) packet.
