Abstract (en)

[origin: EP0603512A1] The invention relates to a device for recording breaks of textile fibre slivers upstream of a drafting machine in the textile industry. The device has to record the sliver break of presented fibre slivers. The object of the invention is, at very high sliver draw-in speeds of a drafting machine (19), to improve the reliability of the recording of sliver breaks of presented textile fibre slivers. A feature according to the invention is that the monitoring device (6) is arranged with a deflecting device (60) for the fibre slivers. <IMAGE>
