Abstract (en)

[origin: EP0603520A1] The invention relates to a child safety seat (1) for fitting on a vehicle seat (2). At least one pivoting support (3) is attached to a safety seat of this kind in a manner such that it can be pivoted between a rest position (4), which limits its pivoting path on the seat side, and at least one pivoting position (5), in which the safety seat (1) can at least partially be supported by way of the pivoting support (3). The pivoting support (3), of which there is at least one, is arranged and designed in such a manner that at least some areas of it can be used in at least one pivoting position (5) either as a clamping support (6), in relation to the vehicle seat (2), at the rear end (7) of the safety seat (1), between a vehicle-seat seat cushion (8) and an adjoining vehicle-seat backrest (9), or can be positioned as a centring support (10), in relation to the vehicle seat (2), at the front end (11) of the safety seat (1), in a front end region (12) of the vehicle-seat seat cushion (8). The pivoting support (3) is provided in at least one pivoting position (5) with holding devices (13) by means of which the clamping support (6) can be locked at least against pivoting to the rear end (7) of the safety seat (1), or the centring support (10) to the front end (11), from the pivoting position (5). <IMAGE>
