Abstract (en)
[origin: EP0603720A1] The invention relates to an anchoring device which is intended for releasable anchoring in front of a facade and comprises an anchor part, designed as a coupling sleeve (11), a coupling connector (20) and a securing element (25) which can be plugged into the coupling sleeve (11) parallel to the coupling connector. In the case of said anchoring device, a plug-in part (22) of the coupling connector (20) is provided with a stop (23) which delimits the plug-in depth, and two anchoring bars (12, 12'), which can be fastened on or in a structure wall, extend, at a distance from one another, away from the coupling sleeve (11) on that side of said coupling sleeve which is directed away from the plug-in opening. <IMAGE>
