Abstract (en)
The invention relates to a combination of a container (1) with a round mouth (2) and a cap (3) closing off this mouth (2), which container (1) comprises: a widening (4) situated on the outside; and a number of rise cams (5) situated on the outside in one plane parallel to the mouth opening; which cap (3) comprises: a widening (6) situated on the inside for snap-in co-action with the widening (4) on the outside of the container (1); and a number of cams (8) present on the inside and situated with their axial bottom zone (7) between the cams (5) on the outside of the container (1); such that the combination can be made by arranging the cap (3) on the container (1) with axial pressure, and that by rotation relative to the container (1) the cap (3) can be removed therefrom. <IMAGE>
