Abstract (en)

[origin: EP0603984A1] A wrapping adapted for locked securement to a flange-shaped edge (30) of a potlike or boxlike container (29) for accommodating, for instance, plants or flowers, and which is made from a relatively stiff material of resilient properties, from which material a tubular element (31) has been formed, wherein a first stop shoulder is formed by first locking means (10), provided near one end of the tubular element, in the form of tab portions (10b) or panel portions which can be pushed inwardly into the tubular element and a second stop shoulder is formed by second locking means (11), formed on that one end of the tubular element, in the form of tabs (11) which can be folded back inwardly to approximately 180 DEG and wherein the first and the second locking means in their non-locking end position are situated such that at least the part of the first locking means that forms the first stop shoulder can be slipped past the flange-shaped edge (30) of the container (29). <IMAGE>
