Abstract (en)

[origin: EP0604300A1] The invention relates to an adjustable positive-displacement pump such as a syringe, gun or pipette, of the type comprising a preferably cylindrical body (9) constituting the reservoir of the pump and closed by a wall (13), a plunger (19) mounted axially sliding inside the said body (9) for injecting a variable quantity of liquid contained between the head (18) of the piston and the said wall (13) of the body, and a support (27) for the reservoir body (9). According to the invention, the reservoir (9) is driven in an axial movement within the support (27) of the reservoir body and is capable of being locked in the said support (27) at at least one suitable position corresponding to a chosen injection volume. Application to veterinary equipment. <IMAGE>
