Abstract (en)

[origin: EP0604317A1] Device for adjusting the position of the printing wheels (5) incorporated within a removable head (2) of a franking machine. A rocking control module (17) mounted on elastic supports (29) is provided in the base (1). It carries motors (M1, M2, M3, M4) mounted in a circular arc around the cylindrical block (16) of driving pinions (R3). When this module (17) is rocked forwards, it engages with kinematic links (20) with pinions (19, 21, 22, 23) which enable the printing wheels (5) to be rotated. <IMAGE>
