Abstract (en)
[origin: EP0604923A2] The invention relates to a sleeve, in particular a dispatch sleeve, with closable ends, at least one end being closable by a preferably cup-shaped press-in lid which engages in the sleeve in a clamping manner, is seated on the end edge at one end of the sleeve and has a safeguard against rolling for the sleeve. In this case, the press-in lid has a plurality of flat radial projections, as the safeguard against rolling, which are seated on the end edge at one end of the sleeve, are arranged at even intervals from one another in the circumferential direction of the press-in lid, and protrude outwards beyond the outer circumference of the sleeve.
