Abstract (en)

[origin: EP0605268A1] - Package (E1) in cardboard or corrugated cardboard, in the form of a basket, for packaging loads such as rows of bottles (BO). - According to the invention, the cover of the said package is formed from two trough pieces (1A, 12.1, 20.1 and 3A, 12.3 and 20.3) with a trapezoidal cross section, which are upturned and nested, permitting accurate production of the said cover regardless of the nature and/or the shape of the load. Provision is also made for a machine making it possible to continuously close the said packages during their progression towards their discharge. <IMAGE>
