Abstract (en)
[origin: EP0534299A1] A device for a tube closure for securing against undesirable opening of the tube before being supplied to the final user is intended to permit securing of a tube which immediately shows that the tube has not been tampered with, for example to the buyer, it also being ensured at the same time that the manageability of the tube does not suffer at the salespoint and it being guaranteed at the same time that securing of the tube itself can be easily achieved. This is achieved in that the device is formed from a cardboard cutout (1a) surrounding the tube closure (2) and a region of the tube body (3), the cardboard cutout (1a) being provided with a pressure-sensitive adhesive (10) for fixation to the tube body (3).
