Abstract (en)

[origin: EP0605829A1] Sealing device particularly for casements and the like including a sealing profiled element (1) which has different hardnesses in transverse cross-section. The body of the profiled element forms a coupling portion (2) made of semirigid material which is rigidly associated with an end portion (10) made of relatively soft material. The body (2), in the coupling portion, forms an internal cavity (5) for the insertion of L-shaped joining elements (6) at the corners of the casement. <IMAGE>
