Abstract (en)
[origin: EP0605838A1] 1. Device for manufacturing cigarette packs (20), the packs (20) having glue connections running through a drying turret (23) with a relatively long dwell time. 2.1. To transfer the packs (20) from a preceding turret, especially a transfer turret (22), onto the drying turret (23), pockets (25, 26) of the two turrets are designed in a special way, so that pocket walls (30, 31, 32, 33) can be moved past one another and, at the same time, transfer the packs (20), without radial displacement, from one pocket (25) to the other pocket (26). 2.2. The packs (20) received by the drying turret (23) pass into elongate receptacles, namely pack shafts (62), in which the packs (20) are gradually displaced during rotation and out of which they finally emerge via an outlet orifice (66) and are transferred onto a discharge conveyor (24). <IMAGE>
