Abstract (en)

[origin: EP0606078A2] An air outlet for air treatment installations is connected at its end via a supply-air connection (3) to an air-duct network and consists of an outer, air-permeable shell (1) and an inner air-permeable shell (2) arranged concentrically thereto, in which one or more horizontal restricting rings (10, 11) are arranged. Inside the inner shell (2) is arranged an inner pipe (6) through which an axial flow can pass, the flow-through cross-section of which inner pipe is variable and its end facing away from the supply-air connection (3) being open. <IMAGE>
