Abstract (en)
[origin: EP0606193A1] The revolving door has two delimiting walls (3) in the form of cylinder segments. Coaxially thereto, a rotor is mounted on the ceiling, such that it can rotate about a rotor spindle (4). Four wings (5) are suspended on the rotor. The wings (5) can pivot about wing spindles (11), adjacent to their outer edges (8), out of the basic position shown in solid lines into the pivot position shown in chain-dotted lines. This permits free passage through the revolving door. <IMAGE>
