Abstract (en)

[origin: EP0606564A1] The subject of the present invention is an adjustment device (5) for the alignment of a drawer or the like which is mounted on running rails (1). The adjustment device (5) consists, according to the invention, of a one-piece functional part, comprising a base body (6), an actuating part (7) and a wedge piece (8), base body (6) and actuating part (7) being interconnected in the manner of a hinge. The hinge region (9) is constructed in the manner of a film hinge and the hinge axis runs parallel to the fastening plane of the base body (6), while the wedge piece (8) extends approximately at right angles to the hinge axis and thus also to the actuating part (7). <IMAGE>
