Abstract (en)

This safety seat for transporting children by bicycle possesses the characteristic of being associated with its own projecting support (1), consisting of a steel rod suitably bent to U shape in a horizontal plane (7B,7C) and bent through a 90<0> angle in a vertical plane (7A) at its ends in order to be able to be located on the bicycle either in a frontal position (9') with the front of the child facing backwards, or in a more rearward position (9'') with the front of the child facing forwards. The seat is also provided with a transverse safety bar (12) hinged (13) laterally to be able to be removed for the positioning and withdrawal of the child, after releasing a snap-locking device (14) provided on the other end of the bar. <IMAGE>
