Abstract (en)
Universal supporting construction, which comprises a wall-support (2) and a building support (3) co-acting therewith. The wall-support (2) is designed at least at one end with a tubular section (9) and is provided with one part of a pin and sleeve fitting assembly (7, 14), which part is coupled to the wall support (2) at a distance of its tubular section (4) through a connecting rod (8). The building support (3) is provided with a hook-shaped support (11), of which the hooked end (12) is suitable for a close hooking-on in the tubular end section (9) of the wall support (2). The building support (2) is further provided with the remaining part of said pin and sleeve fitting assembly (7, 14), which remaining part is coupled to the outer wall of the building support (3) at a distance of the hook-shaped support (11) to obtain a close fitting between the pin and the sleeve parts (7, 14). This construction improved the safety for the building workers during the building activities. <IMAGE>
