Abstract (en)

[origin: EP0607626A1] During the transport of the piles of blanks (14) in the direction of their longitudinal extension, the strap (15) surrounding the pile of blanks (14) in the transverse direction is severed on the underside (bottom wall 19) by a stationary severing knife (35). The pile of blanks (14), together with the severed strap (15), is conveyed further to a point above a magazine shaft (13, 13a). Here, the strap (15) is held by suckers (39) and is sucked off via a lateral suction channel (40). <IMAGE>
