Abstract (en)  
[origin: EP0607717A2] The invention relates to a process for the protection of electroplating tooling and a product obtained by this process, as well as to a device for the utilization of the process. Protection of the tooling is effected in the form of cladding comprising at least two layers of different plastics from the plastisols family. The tooling thus obtained is protected by two or more plastisol layers (3, 4), the outer layer (4) being harder than the other layer(s) (3). The device for the utilisation of the process comprises a plurality of work stations, each corresponding to one step of the process. <IMAGE>
