Abstract (en)

[origin: DE4301529C1] An installation for a finishing process on textile material consists of two revolving rollers which are set apart. At least one of the rollers is assembled with a driven shaft, and several free running rollers in close proximity mounted on the shaft. USE - The textile material may be in the form of thread or band. It travels along the roller arrangement without friction, and there is tolerance for expansion or shrinkage. Application may include stretching, drying, finishing, dyeing or continuity.
