Abstract (en)

[origin: EP0607895A1] This installation includes a repository device for information carriers (record cabinet RC for compact discs, for example) which are able to be served by a transfer device (8) for selectively placing the carriers in recording/reproducing apparatuses (2). The loading and unloading of the repository device RC can be carried out by means of a temporary storage device (7) preferably taking the form of a removable cassette. The latter can be served by the transfer device (8) in the same manner that the latter serves the record cabinet. The installation's transfer and recording/reproducing operations are controlled by a suitably programmed computer C. Application in particular to the radio broadcasting of sound programmes from a collection of compact discs. <IMAGE>
