Abstract (en)

[origin: EP0607945A1] Condenser (D) of card web (V) for card set (C,P), comprising a pair of horizontally adjacent take-in rollers (15,16); a plurality of tapes guided around said rollers in alternating diverging directions to divide the card web into ribbons in a plurality of horizontally distributed banks; means for feeding the ribbons vertically to a plurality of rubbing leathers (42) and to a plurality of collecting spools (CA); and spool change-over means and spool transporting means (51,52). Said change-over means (50) comprise, for each collecting (CA) spool, a transfer roller (43), means (44) for feeding and distributing the roving (41) to said transfer cylinder, a support in the form of a pair of oscillating arms (47) for supporting a spool in the course of winding in contact with said cylinder, between a loading position and a discharging position. Said transporting means comprise at least one carriage (52) mounted so as to move on horizontal guides positioned beneath the condenser (D) and equipped with a plurality of supporting saddles (51), each for one spool. <IMAGE>
