Abstract (en)
[origin: EP0607975A1] In an enclosure (10) for a refuse container, at least one waste collection container (12) is arranged. In order that the waste collection container arranged in the enclosure for a refuse container can be linked without further effort to the lift-and-tilt device of the refuse collection vehicle, one side of the waste collection container (12) simultaneously forms at least part of a side wall of the enclosure (10) for a refuse container. A receiving device (22) projects outwards from this side wall of the enclosure (10) for a refuse container.
