Abstract (en)
Standing element or standard, formed by a number of standard folding parts, each of which, along two opposite sides in the form of folding lines, is connected to another, which standard folding parts may be folded along the folding lines from a folded up position, in which the surfaces of the standard folding parts are situated on top of or against one another, to an unfolded position, in which the surfaces of the standard folding parts are situated at a distance from each other, thus enabling the standard to stand, whereby at the bottom side or placing side of the standard near the edge parts of at least two standard folding parts a supporting part is connected, formed by at least two supporting folding parts, whereby the supporting folding parts may be unfolded along one or more folding lines from a folded up position to an unfolded position, such that the supporting folding parts in the unfolded position lie in one plane with the placing side of the standard. <IMAGE>
