Abstract (en)

[origin: EP0608039A1] A shoplifting detection system, in particular suitable for use in shops designed as supermarkets, which detection system is designed to generate in a plurality of passageways separated from each other by obstacles a magnetic detection field by means of suitable transmitting antennas so as to enable by means of suitable receiving antennas detection of a responder located in the detection field and disturbing the detection field, transmitting and receiving units being provided which are connected with the transmitting and receiving antennas, wherein on both sides of each obstacle placed between two passageways antennas of the same type are provided while the type of antenna of two juxtaposed obstacles separated by a passageway is always different. <IMAGE>
