Abstract (en)

[origin: EP0608186A1] It includes a through-hole internal reinforcement (13) made from reinforced fabric, which is short, located at the level of the runner, in the form of an inverted trough and which is separated from the upper face (topsheet) (6, 7) of the ski by spacers (19, 20) made from "hot-melt" adhesive beads. When fabricating the mould, these beads (19, 20) make it possible to preposition this reinforcement (13) while keeping it at a distance from the upper face (6, 7). <IMAGE>
